DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-10, drawn to a quad compensated ensembled crystal oscillator system, classified in class 331, subclass 11.
 - II. Claims 11-14 and 22-35, drawn to a quad compensated clock for use in a borehole system, classified in class 368, subclass 118.
 - III. Claims 15-21 and 36-42, drawn to a system for measuring a parameter of earth formation in the vicinity of a borehole, classified in class 73, subclass 488.
2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the oscillator system of Group I does not require the electrical connection required in Group II. The subcombination has separate utility since it can be used in a system other than a borehole system as claimed.
3. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant

Art Unit: 2854

case, the combination as claimed does not require the particulars of the subcombination as claimed because the system of Group III does not require all of the structure of the system in Group I. The subcombination has separate utility such as measuring the borehole without a geophysical sensor.

4. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system in Group III does not require all of the structure of the system in Group II. The subcombination has separate utility such as measuring the borehole without using geophysical sensor.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
